

CASH CARNIVAL

Cash Carnival is a new promotion that will replace Clothes Line Cash on a Wednesday night

To be involved in promotion patrons purchase tickets through raffle machine, tickets are \$1 for 10 numbers patrons can purchase as many numbers as they want

How the game works is there are 30 ducks to choose from behind 25 of the ducks is an amount ranging from 20 to 50 bonus points behind 5 of the ducks is the word "Player".

The break down of bonus points is as follows:

- 15 x 20 bonus points
- 5 x 30 bonus points
- 3 x 40 bonus points
- 2 x 50 bonus points

If a patron selects a duck with an amount behind it they instantly win and receive that amount of bonus points.

If a patron selects a duck with "player" on it they will then play the alley ball game.

How the alley ball game works is as follows

There are 5 numbers to choose from behind each number is an amount of bonus points, the amounts are as follows:

- 1 x 30 bonus points
- 1 x 40 bonus points
- 1 x 50 bonus points
- 1 x 60 bonus points
- 1 x 70 bonus points

The amount behind each number changes every week, also behind 3 of the 5 numbers is the word "Jackpot" (the word "Jackpot" is behind different numbers every week)

What ever number between 1 and 5 the patron selects they instantly win the amount of bonus points behind that number, if they select a number with "Jackpot" behind it they play for the jackpot as well as winning the amount of bonus points behind there selected number.

How they play for the "Jackpot" is as follows:

The 3 patrons who select the number with the word "Jackpot" are the only 3 patrons who can play for the jackpot.

The order in which the jackpot is played gets decided by rolling a dice.

Each player roles the dice once, the patron with the highest number goes first the patron with the second highest number goes second and the patron who roles the lowest number goes last.

Once this order has been decided they go in this order of rolling the dice one at a time they add up the numbers on the dice as they roll and the first one to reach 12 is the winner.

Once the winner is determined a lucky number between 2 and 12 is revealed (this number changes every week) the winner must then roll two dice if the 2 numbers on the dice add up to the lucky number then that patron wins the jackpot amount.

The jackpot amount starts at \$50 and if not won increases by \$50 each week. Once the jackpot amount reaches \$250 it must be won, the way it is won is the first patron playing for the jackpot that reaches 12 automatically wins the \$250 and does not have to play for the lucky number.
